## CLAIM AMENDMENTS

## 1 - 50. (canceled)

- 51. (currently amended) The coffee machine defined in claim [[50]] 54 wherein the pivot is below the slide.
- 52. (previously presented) The coffee machine defined in claim 51 wherein the guide means further includes a nonstraight guide along which the slide is displaceable.

## 53. (canceled)

- 54. (previously presented) A coffee machine comprising:
- a housing;
- an upper supply part on the housing and a lower supply
  part movable relative to the upper part between an upper position
  and a lower position;
- a container adapted to hold a charge of coffee grounds and fittable with the lower supply part;
- guide means on the housing and container including a slide and a pivot for displacement of the container between
- a coffee-making position fitted with the lower

  part and pressing the lower part into the

  upper position, and

14

2

chamber.

lower part and tipped away from the lower 15 part, whereby in the loading/emptying 16 position coffee grounds can be loaded into 17 or cleared out of the container, the 18 container being separable from the housing 19 in the loading/emptying position; 20 supply means connected through the upper supply part with 21 the lower supply part for forcing a hot fluid through the coffee 22 grounds in the container only in the coffee-making position of the 23 container; 24 25 a plurality of telescoping parts extensible to form an infusion chamber capable of holding the coffee grounds and fittable 26 with the supply lower part and collapsible for clearing of the 27 grounds from the chamber; and 28 abutment means for sequential shifting of the parts on 29 movement from a collapsed position to an extended position. 30 (previously presented) The coffee machine defined in 1

a loading/emptying position spaced from the

- 3 -

in the collapsed position for clearing the coffee grounds from the

a clearing element that can sweep across one of the parts

claim 54, further comprising

- 56. (previously presented) The coffee machine defined in
- 2 claim 54, further comprising
- a latch lever for securing together the parts on
- separation of the container from the housing.
- 57. (previously presented) The coffee machine defined
- in claim 54, further comprising
- safety means for preventing operation of the supply means
- when the parts are improperly fitted to the lower supply part.
- 58. (previously presented) The coffee machine defined
- in claim 57 wherein the safety means includes position detecting
- means on the housing for detecting the position of one of the
- 4 telescoping parts.
- 59. (previously presented) A coffee machine
- comprising:
- a housing;
- an upper supply part on the housing and a lower supply
- part movable relative to the upper part between an upper position
- and a lower position;
- a container adapted to hold a charge of coffee grounds
- and fittable with the lower supply part;
- guide means on the housing and container including a
- slide and a pivot for displacement of the container between

1

a coffee-making position fitted with the lower 11 part and pressing the lower part into the 12 upper position, and 13 a loading/emptying position spaced from the 14 lower part and tipped away from the lower 15 part, whereby in the loading/emptying 16 17 position coffee grounds can be loaded into or cleared out of the container, the 18 container being separable from the housing 19 in the loading/emptying position; and 20 supply means connected through the upper supply part with 21 the lower supply part for forcing a hot fluid through the coffee 22 grounds in the container only in the coffee-making position of the 23 container; and 24 safety means including spring-loaded teeth engageable 25 between the housing and the container for preventing operation of 26 the machine when the container is not in a position fitted 27 perfectly to the housing. 28

60. (previously presented) The coffee machine defined in claim 59 wherein the safety means include a cover engageable with the container and a switch operable by the cover when the cover engages the machine in the perfectly fitted position of the container.

1	. 61	. (currently an	nended)	The coffee machine defined in
2	<del>claim 50, fu</del>	rther comprising	A coff	ee machine comprising:
3	<u>a</u>	housing;		
4	ar	upper supply pa	rt on th	ne housing and a lower supply
5	part movable	relative to the	upper p	part between an upper position
6	and a lower	position;		• 17
7	<u>a</u>	container adapte	ed to hol	d a charge of coffee grounds
8	and fittable	with the lower	supply p	part;
9	இ	ide means on the	housing	and container including a
10	slide and a	pivot for displa	cement o	of the container between
11		a coffee	e-making	position fitted with the lower
12		par	t and pr	ressing the lower part into the
13		upr	er posit	cion, and
14		a loadir	ng/emptyi	ing position spaced from the
15		lov	ver part	and tipped away from the lower
16		par	t, where	eby in the loading/emptying
17		gog	sition co	offee grounds can be loaded into
18		or	cleared	out of the container, the
19		COL	ntainer b	peing separable from the housing
20		<u>in</u>	the load	ling/emptying position;
21	<u>s</u> 1	pply means conne	ected thr	rough the upper supply part with
22	the lower su	pply part for fo	orcing a	hot fluid through the coffee
23	grounds in t	he container on	ly in the	e coffee-making position of the
24	container; a	ınd		

25	means including a valve upstream of the supply means
26	openable to supply water thereto, the valve including
27	a hollow valve body,
28	a piston slidable in the valve body and having an
29	end face forming a variable-volume compartment
30	with the valve body, and
31	three annular outwardly open grooves formed on the
32	piston, the piston having an end face forming a
33	variable-volume compartment with the valve
34	body, the piston further having a first duct
35	extending between one of the grooves and the
36	compartment and a second duct extending between
37	another of the grooves and the exterior.

62 - 64. (canceled)
